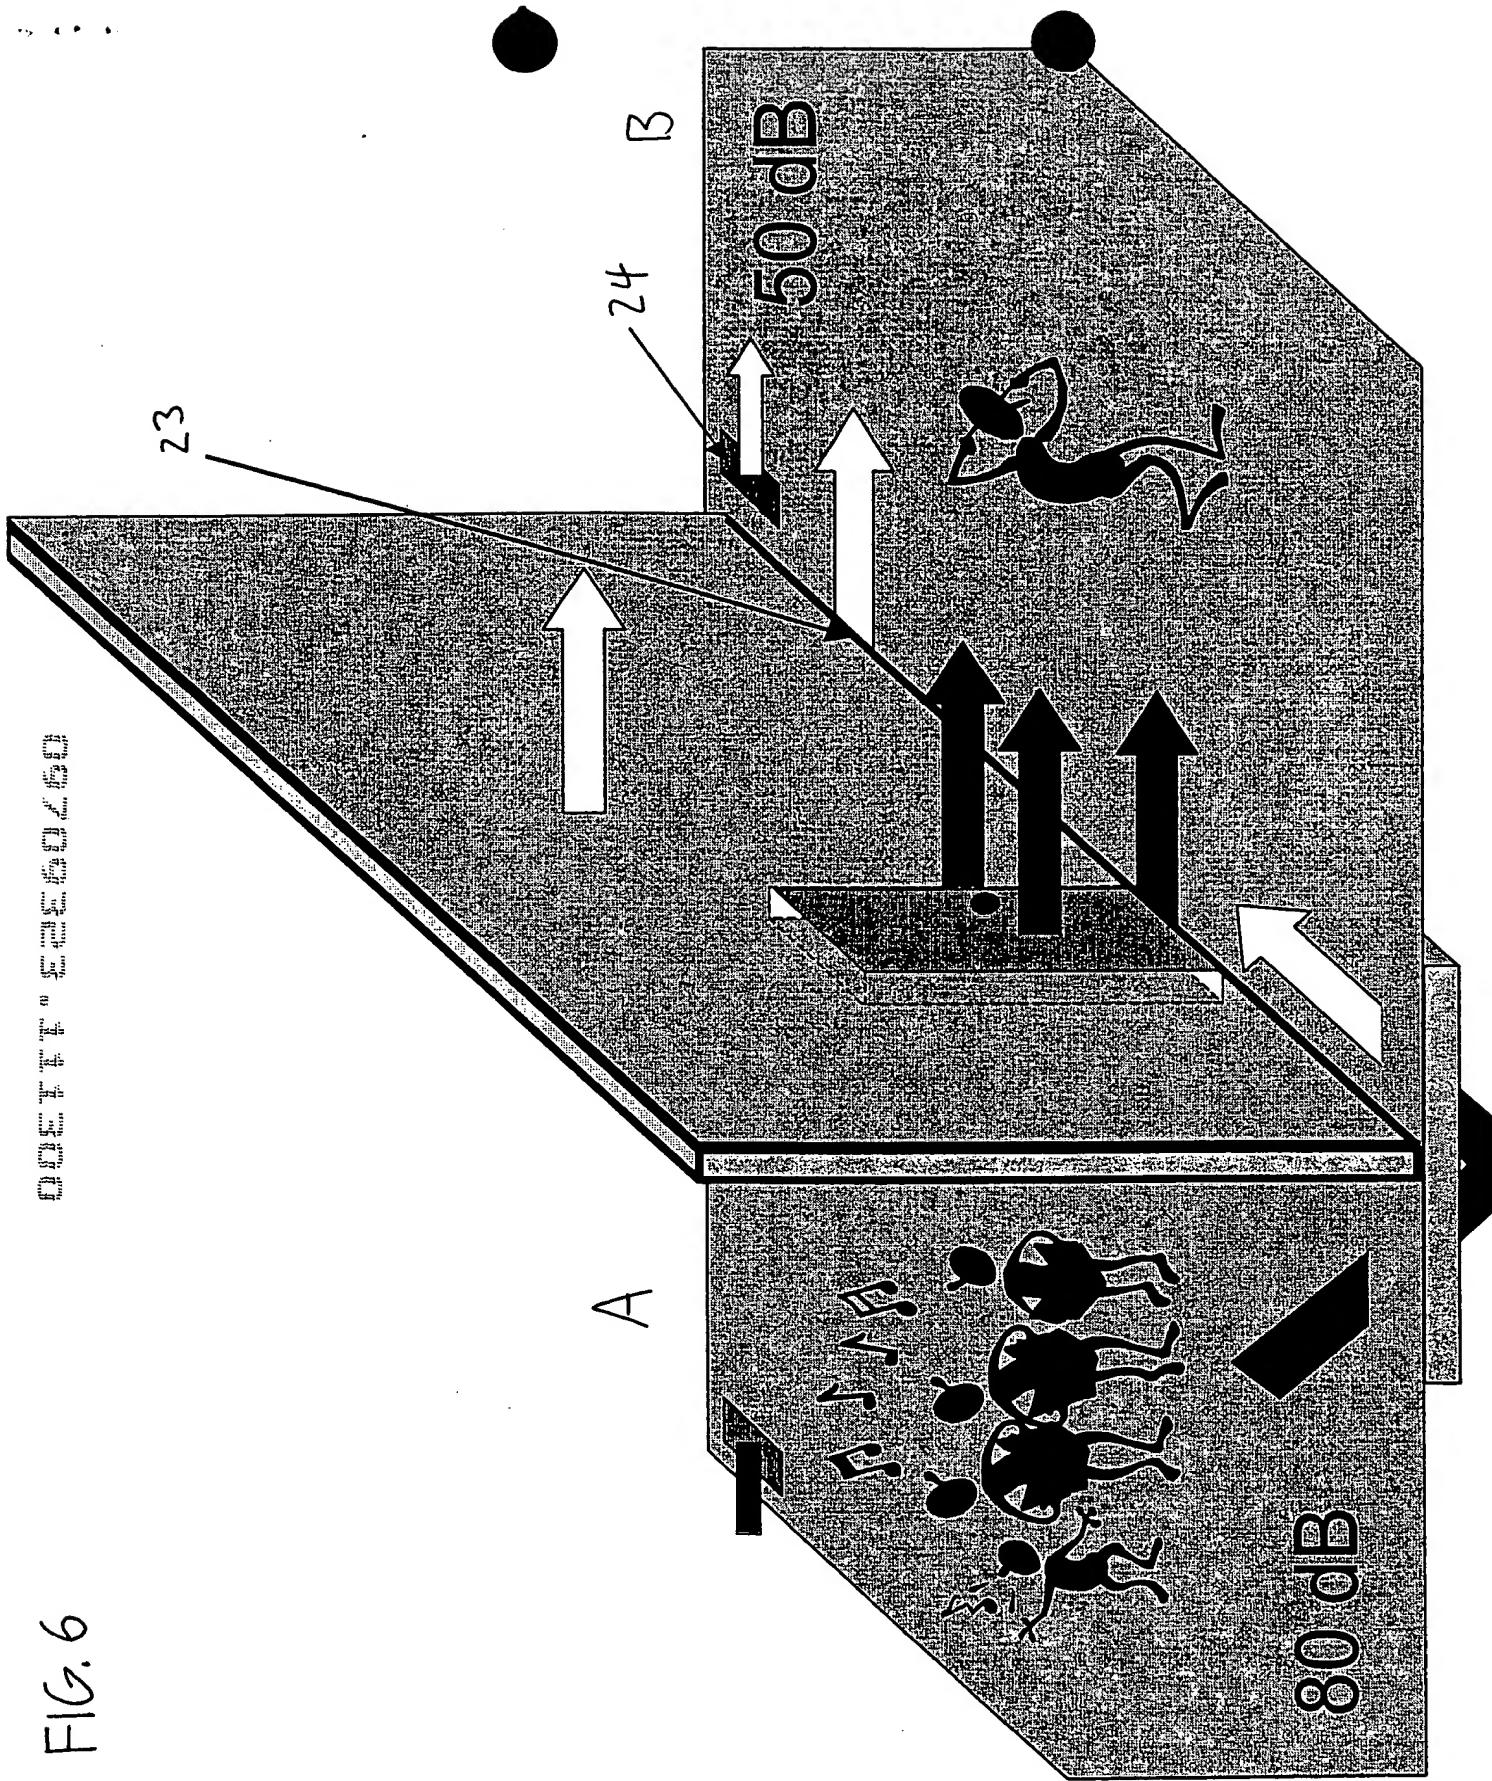

Figure 1. The effect of the number of trials (n) on the probability of error (α) for different values of the parameters k and m . The figure shows two sets of curves, one for $k=0.5$ and one for $k=1$. Each set contains three curves corresponding to $m=0.5$, $m=1$, and $m=2$. The curves show that the probability of error decreases as the number of trials increases, and that the probability of error is lower for larger values of k and m .
